SKILLS

- **Languages:** C++, Python, SQL
- **Technologies:** FastAPI, REST APIs, Streamlit
- **Databases/Tools:** MySQL
- **Tools:** Git, GitHub, VS Code
- **Agentic AI/LLM** LangGraph, RAG, Qdrant, Gemini Embeddings, Groq API
- **Soft Skills:** Prioritization , Adaptable, Initiative, Collaboration

PROJECTS

- Multi-Agent Research Assistant | [GitHub](#) | [Live](#)**May 2026 — Present
- Developed a multi-agent AI research assistant using LangGraph, orchestrating Planner, Researcher, Retriever, Critic, and Reporter agents with an iterative feedback loop to automate research and generate structured reports.
 - Built a Retrieval-Augmented Generation (RAG) pipeline by integrating Qdrant Cloud, Gemini Embeddings, and the Tavily API for semantic retrieval, real-time web search, and context-aware information synthesis.
 - Integrated Groq-hosted Llama 3.3 for low-latency report generation and deployed the application using FastAPI, exposing REST APIs with environment-based configuration and external API integrations**Tech Stack:** Python, LangGraph, Groq API, Qdrant Cloud, Gemini Embeddings, Tavily API, Streamlit, RAG
- Bone Cancer Detection | [GitHub](#) | [Live](#)**Aug 2025 - Sep 2025
- Developed a CNN-based bone cancer detection model using TensorFlow/Keras to classify medical images with automated end-to-end prediction capabilities.
 - Implemented image preprocessing and augmentation techniques, including resizing, normalization, and data augmentation, to improve model robustness and generalization.
 - Trained, validated, and evaluated the deep learning model, optimizing classification performance and integrating an automated inference pipeline for medical image analysis..**Tech Stack:** Python, TensorFlow, Keras, OpenCV, NumPy, Matplotlib, Google Colab
- Smart Loan Recovery System| [GitHub](#)**Aug 2025 - Sep 2025
- Developed a Smart Loan Recovery System to manage borrower records, monitor loan repayments, and automate portfolio tracking using risk-based loan analysis.
 - Implemented a loan risk assessment engine by evaluating borrower credit score, debt-to-income ratio, and employment status to classify loans into Low, Medium, and High risk categories with dynamic interest rate calculation.
 - Built an interactive loan management dashboard with CSV-based data storage, borrower management, payment tracking, portfolio analytics, and recovery summaries using a C++ backend and a responsive web interface. ..**Tech Stack:** C++, Queues, Linked Lists, Data Structures

TRAINING

- Lovely Professional University | [Certificate](#)**Jun 2025 - Jul 2025
- Mastering Data Structures and Algorithms - LPU CPE**
 - Gained hands-on experience in implementing fundamental Data Structures and Algorithms using C++.
 - Developed a Smart Loan Recovery System to streamline borrower management, monitor loan repayments, and automate portfolio tracking through a centralized loan management platform

CERTIFICATES

- Agentic AI Foundation Associate | **Oracle**Aug 2025
 - Generative AI with Large Language Models — DeepLearning.AI | CourseraPresent

ACHIEVEMENTS

- Solved more than **200** programming problems on online coding platforms during regular practice and learning.

EDUCATION

- Lovely Professional University**
*Bachelor of Technology - Computer Science and Engineering; **CGPA: 7.37***

Phagwara, Punjab
Aug 2023 - Present
- Sri Chaitanya Junior College**
*Higher Secondary Education; **Percentage: 93%***

Visakhapatnam, Andhra Pradesh
May 2021 - Mar 2023
- Universal Public School**
*Secondary Education; **Percentage: 96.7***

Visakhapatnam, Andhra Pradesh
Jun 2020 - Mar 2021
